DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

((b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

- 2. Claims 1-4 and 6-8, 10-13, 15-17 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsuda (EP 0588094).
- 3. Matsuda discloses (Fig 1, 2; Column 6, Lines 2-6) a plurality of semiconductor chips comprising a transistor (29) that inherently comprises an insulation layer and a diode (31), at lease three power terminals (3,5,7) provided one above each other, superimposed on each other, and at least one semiconductor chip having a top and bottom surface (surface plane of chip closest to terminals) sandwiched, interposed between a predetermined said two terminals in a device for large power (Column 1, Lines 5-7) in a direction intersecting the top surface and the bottom surface (x-axis/line extends through middle of chip intersects the top surface and the bottom surface an terminals) with the top and bottom surfaces of chip, wherein a portion of a terminal (defined by the top portion of the terminals 3 & 5) on one end among superposed power terminals of a power terminal and a power terminal on the other end among said superposed power terminals are led out in the same direction (3,5), wherein the middle terminal (5, via the top portion) is led out in a direction opposite to a power terminal (7), with at least a first and second face of said semiconductor chip connected to a first and

Application/Control Number: 09/900,946

Art Unit: 2827

second power terminal through soldering (Column 6, Lines 3-6; via both the chip and terminals being attached to substrate,15), and a control electrode (17) and electrode pad (inherent pad formed on chip) connected by wirebonding (Column 6, Lines 32-35); and at least one chip interposed between a predetermined two power terminals (Fig 2) and inherently electrically connected to the two power terminals (Abstract; via wirebond , not labeled and contact with 15) by soldering (Column 6, Lines 4-6); wherein a portion of the uppermost one and lowermost one of said at least three power terminals extend in a same direction; a chip interposed between said terminals includes a plurality of semiconductor chips (29, 31); said transistor inherently has a control electrode (via gate electrode) to control said at least one transistor; said control pad is inherent in wirebond and is inherently connected to the control electrode to control at least one transistor.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Application/Control Number: 09/900,946

Art Unit: 2827

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

- 6. Claims 5, 14 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsuda.
- 7. Matsuda discloses elements stated in paragraph 3 and a screw fixing structure (Fig 3, Item 59).
- 8. Although Matsuda does not appear to explicitly teach "two current flow in opposite directions in said uppermost and lowermost one of the said terminals" and having a screw structure "so as to connect said at least one semiconductor chip by pressure welding", this statement of intended use does not result in a structural difference between the claimed apparatus and the apparatus of Matsuda. Further, because the apparatus of Matsuda is inherently capable of being used for the intended use the statement of intended use does not patentably distinguish the claimed apparatus from the apparatus of Matsuda. Similarly, the manner in which an apparatus operates is not germane to the issue of patentability of the apparatus; Ex parte Wikdahl 10 USPQ 2d 1546, 1548 (BPAI 1989); Ex parte McCullough 7 USPQ 2d 1889, 1891 (BPAI 1988); In re Finsterwalder 168 USPQ 530 (CCPA 1971); In re Casey 152 USPQ 235, 238 (CCPA 1967). Also, "Expressions relating the apparatus to contents thereof during an intended operation are of no significance in determining patentability of the apparatus claim."; Ex parte Thibault, 164 USPQ 666, 667 (Bd. App. 1969). And, "Inclusion of material or article worked upon by a structure being claimed does not impart patentability to the claims."; In re Young, 25 USPQ 69 (CCPA 1935) (as restated

Application/Control Number: 09/900,946

Art Unit: 2827

in In re Otto, 136 USPQ 458, 459 (CCPA 1963)). And, claims directed to apparatus must be distinguished from the prior art in terms of structure rather than function. In re Danley, 120 USPQ 528, 531 (CCPA 1959). "Apparatus claims cover what a device is, not what a device does." Hewlett-Packard Co. v. Bausch & Lomb Inc., 15 USPQ2d 1525, 1528 (Fed. Cir. 1990).

- 9. Claims 9 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsuda.
- 10. Matsuda discloses elements stated in paragraph 3, but does not appear to disclose that the control electrode is led out in a direction opposite or perpendicular to said at least one power terminal.
- 11. In any case, it would have been an obvious matter of design choice bounded by well known manufacturing constraints and ascertainable by routine experimentation and optimization to choose these particular dimensions because applicant has not disclosed that the dimensions are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical, and it appears prima facie that the process would possess utility using another dimension. Indeed, it has been held that mere dimensional limitations are prima facie obvious absent a disclosure that the limitations are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical. See, for example, In re Rose, 220 F.2d 459, 105 USPQ 237 (CCPA 1955); In re Rinehart, 531 F.2d 1048, 189 USPQ 143 (CCPA 1976); Gardner v. TEC Systems, Inc., 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984); In re Dailey, 357 F.2d 669, 149 USPQ 47 (CCPA 1966).

Response to Arguments

Applicant's arguments filed December 12, 2002 have been fully considered but are most because of new rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Mitchell whose telephone number is (703) 305-0244. The examiner can normally be reached on M-F 10:30-8:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David L. Talbott can be reached on (703) 305-9883. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 305-3432 for regular communications and (703) 305-3230 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
